Unlisted Pesticide Ingredient	Reason for Use	Total Quantity Unlisted Pesticide Ingredient Used (kg)		Reason for Increase/Decrease from Previous Calendar Year
		2019	2020	
carfentrazone-ethyl	moss control	NA	.309	moss becoming an issue on greens

for the year 2020

Golf Course: Tyandaga Municipal Golf Course

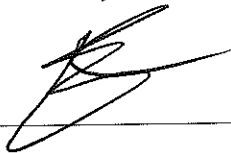

Please upload map(s) of the golf course showing the locations where unlisted pesticides were applied, and identify use by unlisted pesticide ingredient or by product type (fungicide, insecticide, herbicide, growth regulator)

Please explain how practicing integrated pest management (IPM) and maintaining IPM accreditation with the IPM Council of Canada minimized the use of pesticides on your golf course and how it will minimize use in this current calendar year.

We have been using IPM for many years at Tyandaga Golf Course to help minimize the use of pest control products and continue to try and use as little as possible while still providing the conditions that our patrons expect. Scouting and monitoring helps to ensure that we are only applying when needed. We have many naturalized areas where we do not spray any pesticides throughout the golf course and focus more on the key turf areas for use. As much as possible we try and use cultural control methods to help minimize the chances of problems. We will continue to monitor and scout and keep our usage rates as low as possible.

We, the undersigned, attest that the above information is accurate and inclusive of all pesticide products applied on our golf course for the entire year. We are aware that it is an offence under the Pesticides Act: 17(6) to include false or misleading information in any document or data required to be created, stored or submitted under the Act.
